- 1. High Temperature: The chemical seal is designed to operate at temperatures up to 900°C.
- 2. High Pressure: The chemical seal is designed to operate at pressures up to 10 MPa.
- 3. High Vibration: The chemical seal is designed to operate at vibration levels up to 5g.
- 4. High Shock: The chemical seal is designed to operate at shock levels up to 10g.
- 5. High Humidity: The chemical seal is designed to operate at humidity levels up to 95%.
- 6. High Salt Crystallization: The chemical seal is designed to operate at salt crystallization levels up to 1000 ppm.
- 7. High Corrosion: The chemical seal is designed to operate at corrosion levels up to 1000 ppm.
- 8. High UV Radiation: The chemical seal is designed to operate at UV radiation levels up to 1000 hours.
